

Anderson Owen has nesting at just \$85,000 + GST

With more and more customers looking for CNC machines to replace their panel saws. Anderson have looked to develop a model range of CNC specifically for this application. The objective was to simplify a CNC machine specially for nesting. To this end Anderson created an internal division called Owen with a range of CNC machines focused on nested based manufacturing. This division has come up with the Genesis range with three model sizes: 2500mm x 1300mm, 3000mm x 1300mm and 3700mm x 1900mm, all of which are easy to use.

Despite the low price Anderson with its Owen range, have not made the mistake of making a toy machine missing the essential elements required for nesting. The following are standard features of all three models:

- strong ridged frame base
- Gantry frame
- Router with rear tool changer
- Large Z axis passage height
- Drilling head
- True nesting table with grid for cups & jigs
- Becker 250 cu vacuum pump
- Pin stop for easy positioning of the panels
- SYNTEC Controller with real time graphics
- Remote control hand device
- Tool touch off setting device
- Optional panel push off device

While the starting price of around \$85,000 is very competitive, look more closely as to what it really buys you. While others say they have a machine in this price range, see for yourself – simply compare what you get. Even our photos are more impressive.

Talk To Prowood

For many years Prowood Machinery has been advertising in JOINERS Magazine with most business coming from the upper North Island. Many customers have not seen a representative from Prowood however we do encourage customers looking for CNC nesting machines, edgebanders, panel saws and other woodworking machinery to give us a call to see what we have to offer. We are confident we can offer a good solution which could be cheaper than other machinery suppliers. Our overheads are lower and hence our prices better.

We focus on personal relationships with customers. You will deal with the owner of the business. We are not driven by the big brand name, only what works and represents good value for money. We have solutions for both industrial and light commercial users. Why not at least phone to see if we have a solution – you may save thousands of dollars.

ANDERSON OWEN has it all for nesting

From
\$85,000 + gst

3 sizes available

2500 x 1300
3000 x 1300
3700 x 1900

- purpose built nesting machine
- router with rear tool change
- on board drilling head
(no need to use router for drilling)
- pin stops for easier positioning of sheet
- Syntec controller with on board graphics
- option for off load pusher device

Maximising cupboard space

Create more stylish storage space in previously unused and un-reachable areas of your kitchen. All the fittings in the Huwil range are easy to open, silent and smooth to operate, offer sophisticated design and allow the kitchen user to utilise high wall cupboard storage space.

The Senso Bi-folding Lift Up fitting for two door flaps folds in the centre when opening. The door can be adjusted to individual heights, remains easy to reach in any desired position, and closes smoothly and silently, thanks to Huwil's soft-close mechanism.

The Verso Swing Up flap fitting is great for overhead cabinets with larger fronts, as the door swings up and over the cabinet. If the cabinet has a cornice or moulding, the door will swing up and over. Like all Huwil overheads, the door stops in the desired position and closes smoothly and quietly.

The Strato Parallel lift up front fitting for single fronts lifts parallel to the cabinet. This lift is ideal for wall cabinets that have cabinets above. The Strato is great for concealing microwaves and appliances. Like the other lifts from Huwil, the Strato can be stopped at any desired position, making it easy to open and close.

All three overhead fittings are also available in an electronic version. The E-Senso, E-Verso and E-Strato, offer electric opening and closing and include a programmable push button, which allows the user to set the stopping point of the door. The button can be installed in the bottom of the cabinet, out of sight. The mechanism simply kick starts the movement and the gas struts do the rest, saving energy and money without compromising stability. Also, the button may be programmed to open several door flaps at once, an ideal solution for commercial kitchens.

All Lift-up fittings from Huwil are silver grey in colour, and suitable for both aluminium framed and timber doors from 350 – 900 mm wide and up to 24.5kg in weight. With built-in soft-close fittings, you can be guaranteed that the cabinet doors operate smoothly and quietly.
